

AGFJ100 Registration - Global Bed Bank

Global System Rules (All Pages)

- **Navigation:** Every page from Page 2 onward must include prominent **Back** and **Cancel** buttons.
- **User Prompts:** All instructions, field labels, and tooltips must be highly descriptive and written in plain, accessible language.
- **Glossary:** A persistent "Glossary of Terms" icon/sidebar must be accessible to users to define registration tiers, age limits, and acronyms.

Page 1: Registration & Attendee Details

1. Church Search & Category Selection Workflow

To prevent errors from inaccurate HQ data, **do not strictly lock categories to church names in the database**. Instead, use a flexible validation workflow:

- [Step 1: Type & Select Church Name]
↓
- [Step 2: Select Church Category] (Pastor manually selects based on active size)
↓
- [Step 3: Validation Check] (System ensures Total Attendees <= Max Category Limit)
- **Church Name Lookup:** Preloaded from the official General Secretary's list. If an overseas delegate or non-AG attendee is registering, they will select from the special categories below.
- **Category Selection (With Live Expanding Info/Definitions):**
 - **Small Church:** 1 – 50 members
 - **Medium Church:** 51 – 100 members
 - **Very Large Church:** 300+ members
 - **World Fijian Congress:** Australia, New Zealand, USA, Great Britain and then have pre-loaded lists for churches
 - **Individuals:** [New] Dedicated options for individuals, international guests, or external churches who do not fit local AG categories.
 - **AGFJ Missionaries:** (Existing List)

2. Registration Fields & Attendance Breakdown

- **Registrar Information:** Full name of the person filling out the form.
- **Contact Details:** Toggle for Church Contact or Personal Contact (Phone & Email).
- **Attendance Demographics (With Auto-Sum):**
 - **Adults**
 - **NextGen / Youth** (Define clear age bracket, e.g., 13–19 or 13–25)
 - **Kids (Ages 6–12 Only)**
 - **[TOTAL FIELD]:** An automated, read-only field calculating the exact sum of Adults + Youth + Kids.

Page 2: Payment Details & Reference Logic

1. The Unique Reference Number Formula

To ensure the HQ Finance team can easily track who paid what, the system must automatically generate a strict, standardized **Unique Registration ID** using this exact syntax:

[AG100] + [3-Digit Church ID] + [Category Code] + [Rego Total]

- **Category Codes:** Small (**SM**), Medium (**MD**), Very Large (**VL**), Overseas (**OS**), Individual (**IN**), Missionaries (**MI**)

Example: If Calvary Temple is Church **#027**, selects the Very Large category, and registers 301 people, their unique reference is:

AG100-027VL301

2. User Confirmation Screen & Email Copy

Upon clicking "Submit Registration", the screen and the automated email copy must clearly display the following text template:

Required FAQ/Instructions Structure on Page 2:

1. **How can I pay for the registration?**
 - Options displayed: Direct Bank Deposit / IB Transfer, or cash at the nearest Divisional Office or Headquarters.
2. **How will the team at HQ identify who sent the payment?**
 - Instruction: You **must** include your Unique Registration ID (**AG100-027VL301**) in the payment narration/reference field of your bank transfer or M-PAiSA transaction.

3. **I've registered and the church registration fee has been paid? Now what?**
 - Instruction: Once the HQ Finance team manually matches your reference code, you will receive a confirmation receipt and your digital entry tokens.

3. Installment Logic

- **Payment Type Toggle:** User selects **Full Payment** or **Partial Payment**.
- **Installment Selection:** If Partial is selected, a dropdown opens allowing them to choose between **5 to 10 installments**.
- **Hard Deadline:** System displays a clear warning that the absolute final date for all installments is **September 30, 2026**.

Page 3: Backend & Finance Admin Portal

1. Finance Team Data Entry & Tracking

- **Manual Override Box:** A dedicated text input field for the HQ Finance team to enter payment receipt details when tracking offline/bank transactions.
- **Payment Type Tracking:** Ability to log if an entry is an individual installment or a lump-sum payment.
- **Live Balance Ledger:** The system must display a real-time ledger for each church showing: [Total Fee](#) | [Amount Paid](#) | [Remaining Balance](#).
- **Audit Trail:** Every payment confirmation must explicitly log and display the username of the Finance Officer who approved it ("Confirmed by: [Staff Name]").
- **Instant Notifications:** The moment finance saves a payment entry, the data is automatically emailed to aogfj_finance@connect.com.fj and an updated balance narration is triggered to the user.

2. Pre-Live Reports

- The system must have a "Reporting Module" accessible to admins allowing them to pull, filter, and export comprehensive attendee and financial data lists before the platform goes live to the public for testing and verification.

QR Code Access Tokens

Upon **final/confirmed payment verification** (or approved partial milestone, depending on your policy), the system generates **only two types** of unique QR codes:

1. **Adult QR Code**
 2. **NextGen (Youth) QR Code**
- (Note: No QR codes are to be generated for the Kids category).
